Lab 2: Build the website interface by BootStrap

1. Install Bootstrap 5

In your project directory, install Bootstrap 5 and its dependencies by running the following command:

```
npm install bootstrap@5.3.2
```

Import Bootstrap styles in your React components by adding the following line at the top of your component file:

```
import 'bootstrap/dist/css/bootstrap.min.css';
```

2. Build the website interface

- Use Bootstrap's grid system to create responsive layouts. You can use the Container, Row, and Col components to structure your content.
- Use Bootstrap's pre-designed UI components, such as buttons, forms, and cards, to enhance the user interface of your website.
- Customize the styles of Bootstrap components by adding your own CSS classes or overriding Bootstrap's default styles.
